

SPRING

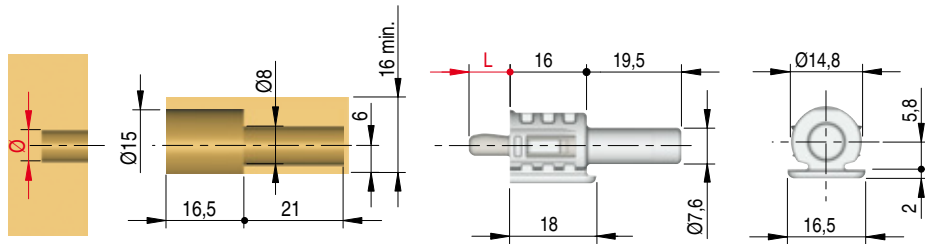

SPRING is the new wood shelf support to be slotted into the shelf by making edge borings. It consists of a plastic sleeve with a spring inside, which clicks the pin in and out. Installing the shelf is quicker due to the intentional leeway of the smooth pin heads, which slot into position without damaging the holes, even off-line holes. It is easy to adjust the position of the shelf; just pull back the shelf-locking clips, to click the pins out of the holes.

In accordance with the regulation: UNI EN 14749/05.
